

Latency Check Professional GUI

Installation guide

Requirements

Installation requirements: Windows 10/11 64-bit, administrator rights for installation, .NET Desktop Runtime 8 for running the main application where required, and administrator rights for Advanced Trace / WPR / ETW features. .NET SDK is not required for normal use; it is needed only for build/compile from source or builder. If a required runtime or analysis tool is missing, the application shows it in the Requirements tab.

Windows Applications / Windows components: LatencyCheck does not require Microsoft Store installation or a separate Windows App SDK for normal use. Advanced trace tools may require Windows Performance Toolkit / WPR / WPA / xperf only when requested by the application or the Requirements tab.

Download Instructions

1. Download the latest LatencyCheck installer.
2. Right-click → Run as administrator.
3. Verify the SHA256 when needed.
4. Advanced Trace / WPR requires administrator rights.

Verify the download

After downloading, compare the SHA256 shown here with the downloaded installer hash.
